## What Is Claimed Is:

- 1. A housing for hearing aids or hearing devices, with a housing shell, a base plate connected to the housing shell and at least a cap arranged at the housing shell or the base plate, whereby at least one electronic or electromechanical element is arranged within the cap.
  - 2. The housing according to claim 1, whereby the electronic or electromechanical elements are having an actuator, whereby the actuator of the element is operable from the outside of the housing shell or the base plate respectively in the closed state of the cap.
  - 3. The housing according to claim 1, whereby the electronic or electromechanical elements consists of switches, coils or memory circuits.
  - 4. The housing according to claim 1, whereby the cap consists of contact elements, which contact elements are electrically connected or arranged respectively with corresponding contact elements of the base plate or housing respectively.
  - 5. The housing according to claim 4, whereby the contact elements are built as contact tongues or contact strip made out of conducting metal, preferably consisting of or made out of precious metal.
  - 6. The housing according to claim 1, whereby the cap is built as a battery support.
  - 7. The housing according to claim 1, whereby spring contact elements or contact tongues are arranged on the base plate or the housing shell, which are in electrical contact with corresponding contact elements of the cap in its closed state.
- 8. The housing according to claim 1, whereby the cap is pivotable connected by an axis to the housing shell or the base plate respectively.
